

Stewardship Policy; Supplier Code of Ethics; Sustainable Forestry Policy; Threatened and Endangered Species Policy; and Wood Procurement Policy.

PARTICIPATING IN PUBLIC POLICY

Our ethical and transparent involvement in public policy includes coalition and relationship building, advocacy, political contributions and grassroots activities. As active members of our communities, we participate in the political process to help shape policy and legislation affecting our company and industry and do so without regard to the private political preferences of executives. All political contributions are managed by our government affairs team. Public policy and legislative priorities are reviewed annually with senior business leaders, our board of directors and our Governance and Corporate Responsibility Committee. We follow both the letter and the spirit of the laws governing lobbying. Our managers receive regular training on current laws and practices, and we work fairly and honestly with public officials at all levels. Some states allow companies to contribute directly to campaigns for state and local offices and for ballot measures. We file these contributions as required at state and local levels. We also sponsor a U.S. Weyerhaeuser Political Action Committee (WPAC), which solicits voluntary contributions from eligible shareholders, employees and our board of directors. WPAC contribution reports are filed with the Federal Election Commission, and we provide a summary of our annual WPAC political donations in the sustainability section of our website.

WHAT WE DO

This section provides information about how we:

- grow and harvest trees,
- maximize the value of every acre we own and
- manufacture and sell wood products.

For each of our business segments, we provide details about what we do, where we do it, how much we sell and where we are headed.

TIMBERLANDS

Our Timberlands segment manages more than 10 million acres of private commercial timberlands in the U.S. We own 9.7 million of those acres and control the remaining acres through long-term contracts. In addition, we have renewable, long-term licenses on more than 14 million acres of Canadian timberlands. This includes licenses for acreage in British Columbia, which will be transferred to the purchaser of our Princeton lumber mill upon regulatory approval.

WHAT WE DO

Forestry Management

Our Timberlands segment:

- grows and plants seedlings to reforest harvested areas using the most effective regeneration method for the site and species (natural regeneration is employed and managed in parts of Canada and the northern U.S.);
- manages our timberlands as the trees grow to maturity;
- harvests trees to be converted into forest products, such as lumber, oriented strand board, engineered wood products, pellets, pulp and paper;
- manages the health of our forests to sustainably maximize harvest volumes, minimize risks, and protect unique environmental, cultural, historical and recreational value and
- offers recreational access.

We seek to maximize the returns from our timberlands by selling delivered logs and through stumpage sales to both internal and external customers. We leverage our expertise in forestry using research and planning systems to optimize log production and innovative planting and harvesting techniques across varying terrain. We use intensive, customized silviculture to increase forest productivity and returns while managing our forests on a sustainable basis. We use our scale, infrastructure and supply chain expertise to deliver reliable and consistent supply to our customers.

Competitive factors within each of our market areas generally include price, species, grade, quality, proximity to wood-consuming facilities and the ability to consistently meet customer requirements. We compete in the marketplace through our ability to provide customers with a consistent and reliable supply of high-quality logs at scale volumes and competitive prices. Our customers also value our status as an SFI certified supplier.

Sustainable Forestry Practices

We manage our forests intensively to maximize the value of every acre and produce a sustainable supply of wood fiber for our customers. At the same time, we are careful to protect biological diversity, water quality and other ecosystem values. Our working forests also provide unique environmental, cultural, historical and recreational value. We work hard to protect these and other qualities, while still managing our forests to produce financially mature timber. We follow regulatory requirements, voluntary standards and certify 100 percent of our North American timberlands under the SFI Forest Management Standard.

Canadian Forestry Operations

In Canada, we manage timberlands under long-term licenses that serve as the primary source of raw material for our manufacturing facilities in various provinces. When we harvest trees, we pay the provinces at stumpage rates set by the government. We transfer logs to our manufacturing facilities at cost and do not generate any significant profit from the harvest of timber on our licensed acres in Canada.

Timberlands Products

PRODUCTS	HOW THEY'RE USED
Delivered logs: - Grade logs - Fiber logs	Grade logs are made into lumber, plywood, veneer and other products used in residential homes, commercial structures, furniture, industrial and decorative applications. Fiber logs are sold to pulp, paper, oriented strand board and pellet mills to make products used for printing, writing, packaging, homebuilding, consumer products and renewable energy.
Timber	Standing timber is sold to third parties through stumpage sales.
Recreational leases	Timberlands are leased or permitted for recreational purposes.
Other products	Seeds and seedlings grown in the U.S. and wood chips.

HOW WE MEASURE OUR PRODUCTS

We use multiple units of measure when transacting business including:

- Thousand board feet (MBF) — used in the West to measure the expected lumber recovery from a tree or log and
- Green tons (GT) — used in the South to measure weight; factors used for conversion to product volume can vary by species, size, location and season.

We report Timberlands volumes in ton equivalents.

WHERE WE DO IT

As of December 31, 2025, we sustainably managed timberlands in 17 states. This included owned or contracted acres in the following locations:

- 2.5 million acres in the western U.S. (Oregon and Washington);
- 6.7 million acres in the southern U.S. (Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Texas and Virginia) and
- 1.2 million acres in the northern U.S. (Maine, New Hampshire, Vermont and West Virginia).

In Canada, we manage timberlands under long-term licenses that provide raw material for our manufacturing facilities. These licenses are in Alberta, British Columbia, Ontario and Saskatchewan.

Our total timber inventory — comprised of timber on owned and contracted land in the U.S. — is approximately 594 million tons. This timber inventory does not translate into a specific amount of lumber or panel products because the quantity of end products varies according to the age, species, size and quality of the timber and will change over time as these variables adjust.

We maintain our timber inventory in an integrated resource inventory system and geographic information system (GIS). The resource inventory component of the system is proprietary and is largely based on internally developed methods, including growth and yield models developed by our research and development organization. The GIS component is based on GIS software that is viewed as the standard in our industry.

Timber inventory data collection and verification techniques include the use of industry standard field sampling procedures as well as proprietary remote sensing technologies in some geographies. The data is collected and maintained at the timber stand level.

We also own and operate nurseries and seed orchards in Alabama, Arkansas, Georgia, Louisiana, Mississippi, Oregon, South Carolina and Washington.

Summary of 2025 Standing Timber Inventory

MILLIONS OF TONS AS OF DECEMBER 31, 2025	
GEOGRAPHIC AREA	TOTAL INVENTORY ⁽¹⁾
U.S.:	
West	
Douglas-fir/Cedar	156
Whitewood	21
Hardwood	12
Total West	189
South	
Southern yellow pine	286
Hardwood	75
Total South	361
North

(1) Acres include all conservation and non-harvestable areas.

We provide a year-round flow of logs to internal and external customers. We sell grade and fiber logs to manufacturers that produce a diverse range of products. We also sell standing timber to third parties and lease land for recreational purposes. Most of our timberlands are strategically located to take advantage of road, logging and transportation systems for efficient delivery of logs to customers.

Western United States

Our Western timberlands are well situated to serve the wood products and pulp markets in Oregon and Washington. For the year ended December 31, 2025, we sold 38 percent of our total Western log sales volume internally. Additionally, our location on the West Coast provides access to higher-value export markets for Douglas-fir and whitewood logs to Japan, China and Korea. Our largest export market is Japan, where Douglas-fir is a preferred species for higher-value post and beam homebuilding. The size and quality of our Western timberlands, coupled with their proximity to several deep-water

port facilities, competitively position us to meet the needs of Pacific Rim log markets.

Our holdings are composed primarily of Douglas-fir, a species highly valued for its structural strength, stiffness and appearance. All of our lands are located on the west side of the Cascade Mountain Range with soil and rainfall conditions considered favorable for growing this species. Our standing timber inventory is comprised of 83 percent Douglas-fir, 11 percent whitewood and 6 percent hardwood.

Our management systems and supply chain expertise provide us with a competitive operating advantage in a number of areas including forestry and research, harvesting, marketing and logistics. Additionally, our scale, diversity of timberlands ownership and infrastructure on the West Coast allow us to consistently and reliably supply logs to our internal and external customers year-round.

We sell recreational use permits covering approximately 2 million acres of our owned Western timberlands.

2025 Western U.S. Inventory by Species

2025 Western U.S. Inventory by Age / Species

The average age of timber harvested from our Western timberlands in 2025 was 46 years. In accordance with our sustainable forestry practices, we harvest and replant an average of 2 percent of our Western acreage each year.

Southern United States

Our Southern timberland ownership, covering 11 states, is well situated to serve domestic wood products and pulp markets, including third-party customers and our own mills. For the year ended December 31, 2025, we sold 23 percent of our total Southern log sales volume internally. Additionally, our Atlantic and Gulf coastal locations position us to serve emerging log export markets. Our standing timber inventory is comprised of 79 percent Southern yellow pine and 21 percent hardwood.

Operationally, we focus on efficiently harvesting and hauling logs from our ownership and capitalizing on our scale and supply chain expertise to consistently and reliably supply logs to our internal and external customers year-round.

We lease approximately 98 percent of our owned Southern acreage for recreational purposes.

2025 Southern U.S. Inventory by Species

Northern United States

Our Northern timberlands acres contain a diverse mix of temperate broadleaf hardwoods and mixed conifer species across timberlands located in four states. We grow more than 40 species and market over 300 product grades to a diverse mix of customers.

Our large-diameter cherry, red oak and hard maple sawlogs and veneer logs serve domestic and export furniture markets. Our maple and other appearance woods are used in furniture and high-value decorative applications. In addition to high-value hardwood sawlogs, our log mix includes hardwood fiber logs for pulp and oriented strand board applications. Hardwood pulpwood is a significant market in the Northern region and we have long-term supply agreements, primarily at market rates, for over 90 percent of our hardwood pulp production. Our competitive advantages include a merchandising program to capture the value of premium hardwood logs.

2025 Northern U.S. Inventory by Species

2025 Southern U.S. Inventory by Age / Species

2025 Northern U.S. Inventory by Age / Species

The average age of timber harvested from our Southern timberlands in 2025 was 28 years, excluding mid-rotation thinning. In accordance with our sustainable forestry practices, we harvest and replant an average of 3 percent of our acreage each year in the South.

The average age of timber harvested from our Northern timberlands in 2025 was 59 years. Timber harvested in the North is sold predominantly as delivered logs to domestic mills, including our manufacturing facilities. For the year ended December 31, 2025, we sold 8 percent of our total Northern
