

Weyerhaeuser, and we are not able to predict the final resolution of these matters. Although this and related regulations have not had, and we do not expect in 2026 that they will have, a material effect on our operations, they could in the future.

REGULATION OF WATER IN CANADA

In Canada, various levels of government have been working to address water issues including use, quality and management. Recent areas of focus include water allocation, regional watershed protection, protection of drinking water, water pricing and a national water quality index.

Changes to the Canadian Federal Fisheries Act have moved the focus of that legislation from habitat protection to fisheries protection and increased penalties. We expect further changes to these regulations, but we cannot predict the scope or potential effect, if any, on our operations. Although this and related Canadian regulations have not had, and we do not expect in 2026 that they will have, a material effect on our operations, they could in the future.

FORWARD-LOOKING STATEMENTS

This report contains statements concerning our future results and performance that are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These statements include, without limitation, those relating to: our expected future financial and operating performance; our plans, strategies, intentions, ambitions, goals and expectations; our operational excellence and other strategic initiatives, including those pertaining to operating costs and efficiencies, as well as other costs, product development and production; our capital structure and the sufficiency of our liquidity position to meet future cash requirements; our future debt payments; our expectations concerning contingent liabilities and the sufficiency of litigation and other contingent liability reserves and accruals, including but not limited to cost estimates of future litigation and environmental remediation; our cash return framework, including our target percentage return to shareholders of our Adjusted Funds Available for Distribution through quarterly and supplemental cash dividends and/or share repurchases; expected capital expenditures; expected economic conditions, including expectations and drivers relating to markets, pricing and demand for our products; and our expectations relating to pension contributions to our pension and post-employment benefit plans, returns on invested pension plan assets and expected future benefit payments.

Forward-looking statements can be identified by the fact that they do not relate strictly to historical or current facts. They often involve use of words such as “anticipate,” “believe,” “estimate,” “expect,” “intend,” “may,” “plan,” “target,” or “will,” or similar words or terminology. They may use the positive, negative or another variation of those and similar words. These forward-looking statements are based on our current expectations and assumptions and are not guarantees of future events or performance. The realization of our expectations and the accuracy of our assumptions are subject to a number of risks and uncertainties that could cause actual results to differ materially from those described in the forward-looking statements. The factors listed below and those described under *Risk Factors* and *Management’s Discussion and Analysis of Financial Condition and Results of Operations (MD&A)*, as well as other factors not described herein because they are not currently known to us or we currently judge them to be immaterial, may cause our actual results to differ significantly from our forward-looking statements.

RISKS, UNCERTAINTIES AND ASSUMPTIONS

Major risks and uncertainties that affect our business include, but are not limited to:

- the effect of general economic conditions, including employment rates, interest rate levels, inflation, housing starts, general availability of financing for home mortgages and the relative strength of the U.S. dollar;
- market demand for the company’s products, including market demand for our timberland properties with higher and better uses, which is related to, among other factors, the strength of the various U.S. business segments and U.S. and international economic conditions;
- changes in currency exchange rates, particularly the relative value of the U.S. dollar to the Japanese yen, the Chinese yuan and the Canadian dollar, and the relative value of the euro to the yen;
- restrictions on international trade and tariffs imposed on imports or exports;
- the availability and cost of shipping and transportation;
- economic activity in Asia, especially Japan, India and China;
- performance of our manufacturing operations, including maintenance and capital requirements;
- potential disruptions in our manufacturing operations;
- the level of competition from domestic and foreign producers;
- the successful execution of our internal plans and strategic initiatives, including cost reduction initiatives;
- the successful and timely execution and integration of our strategic acquisitions, including our ability to realize expected benefits and synergies, and the successful and timely execution of our strategic divestitures, each of which is subject to a number of risks and conditions beyond our control including, but not limited to, timing and required regulatory approvals or the occurrence of any event, change or other circumstances that could give rise to a termination of any acquisition or divestiture transaction under the terms of the governing transaction agreements;
- demand and continued market development for emerging renewable energy, carbon credits and carbon sequestration;
- raw material availability and prices;
- the effect of weather;
- changes in global or regional climate conditions and governmental response to such changes;
- the risk of loss from fires, floods, windstorms, hurricanes, pest infestation and other natural disasters;
- the effects of significant geopolitical conditions or developments such as significant international trade disputes or domestic or foreign terrorist attacks, armed conflict or political unrest;
- the occurrence of regional or global health epidemics and their potential effects on our business, results of operations, cash flows, financial condition and future prospects;

- energy prices;
- transportation and labor availability and costs;
- federal tax policies;
- the effect of forestry, land use, environmental and other governmental regulations;
- legal proceedings;
- performance of pension fund investments;
- the effect of timing of employee retirements and changes in the market price of our common stock on charges for share-based compensation;
- the accuracy of our estimates of costs and expenses related to contingent liabilities and the accuracy of our estimates of charges related to casualty losses;
- changes in accounting principles and
- other factors described in this report under *Risk Factors* and *Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A)*.

It is not possible to predict or identify all risks and uncertainties that might affect the accuracy of our forward-looking statements and, consequently, our descriptions of such risks and uncertainties should not be considered exhaustive. There is no guarantee that any of the events anticipated by our forward-looking statements will occur, and if any of the events do occur, there is no guarantee what effect they will have on the company's business, results of operations, cash flows, financial condition and future prospects. Forward-looking statements speak only as of the date they are made, and we undertake no obligation to update our forward-looking statements after the date of this report.

RISK FACTORS

We are subject to various risks and events that could adversely affect our business, our financial condition, our results of operations, our cash flows and the price of our common stock.

In addition to the information presented elsewhere in this report, particularly in *Our Business*, *Forward-Looking Statements* and *Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A)*, you should consider the risk factors in this section, as well as those set forth from time to time in our other public statements, reports, registration statements, prospectuses, information statements and other filings we make from time to time with the SEC, in evaluating us, our business and an investment in our securities.

The risks discussed below are not the only risks we face, and our descriptions of such risks, here and elsewhere, should not be considered exhaustive. Additional risks not currently known to us or that we currently deem immaterial also may adversely affect our business, our financial condition, our results of operations, our cash flows and the price of our common stock.

RISKS RELATED TO OUR BUSINESS AND INDUSTRY

MARKET AND OTHER EXTERNAL RISKS

The industries in which we operate are sensitive to macroeconomic conditions and consequently are highly cyclical.

The overall levels of demand for the products we manufacture and distribute reflect fluctuations in levels of end-user demand, which consequently affect our sales and profitability. End-user demand depends in large part on general macroeconomic conditions, both in the U.S. and globally, as well as on local economic conditions. The length and magnitude of industry cycles vary over time, both by market and by product, but generally reflect changes in macroeconomic conditions and levels of industry capacity. Any decline or stagnation in macroeconomic conditions could cause us to experience lower sales volumes and reduced margins for our products.

Low demand for new homes and home repair and remodeling can adversely affect our business, financial condition, results of operations and cash flows.

Our business is particularly dependent upon the health of the U.S. housing market, and specifically on demand for new homes and home repair and remodeling. Demand in these markets is sensitive to changes in economic conditions such as the level of employment, consumer confidence, inflation, consumer income, the availability of financing and interest rate levels. Other factors that could limit or adversely affect demand for new homes and home repair and remodeling, and hence demand for our products, include factors such as changes in consumer preferences, limited wage growth, increases in non-mortgage consumer debt, any weakening in consumer confidence, as well as any increase in foreclosure rates and distress sales of houses.

Homebuyers' ability to qualify for and obtain affordable mortgages could be affected by changes in interest rates, changes in home loan underwriting standards and government sponsored entities and private mortgage insurance companies supporting the mortgage market.

Access to affordable mortgage financing is critical to the health of the U.S. housing market. Generally, increases in interest rates make it more difficult for home buyers to obtain mortgage financing, which could negatively affect demand for housing and, in turn, negatively affect demand for our wood products. After maintaining interest rates at historically low levels for an extended period of time, in the first quarter of 2022 the U.S. Federal Reserve began implementing a policy of incrementally raising rates, which it continued through 2023. Although the Federal Reserve began reducing rates in 2024, they remain well

above pre-2022 levels. We cannot predict the extent to which the U.S. Federal Reserve's current policy will be maintained or the timing, number, extent or direction of future rate adjustments.

Along with prevailing interest rates, other significant factors affecting the demand for new homes relate to the ability of home buyers to obtain mortgage financing. During the last U.S. recession, credit requirements for home lending were severely tightened and the number of mortgage loans available for financing home purchases were thereby severely reduced. Although the availability of credit has improved since that time, the housing market could be limited or adversely affected if credit requirements were to again tighten or become more restrictive for any reason.

Additionally, the liquidity provided to the mortgage industry by Fannie Mae and Freddie Mac, both of which purchase home mortgages and mortgage-backed securities originated by mortgage lenders, has been critical to the home lending market. Any political or other developments that would have the effect of limiting or restricting the availability of financing by these government sponsored entities could also adversely affect interest rates and the availability of mortgage financing. Whether resulting from further direct increases in borrowing rates, tightened underwriting standards on mortgage loans or reduced federal support of the mortgage lending industry, a challenging mortgage financing environment could reduce demand for housing and, therefore, adversely affect demand for our products.

Changes in regulations relating to tax deductions for mortgage interest expense and real estate taxes could harm our future sales and earnings.

Significant costs of homeownership include mortgage interest expense and real estate taxes, both of which are generally deductible for an individual's federal and, in some cases, state income taxes. Federal legislation reduced the amount of mortgage interest and real estate taxes that certain taxpayers may deduct. These and any similar changes to income tax laws by the federal government or by a state government to eliminate or substantially reduce these income tax deductions, or any significant increase in real property taxes by local governments, may increase the cost of homeownership and thus could adversely affect the demand for our products.

Catastrophic events may adversely affect the markets for our products and our business, financial condition, results of operations and cash flows.

We are subject to the risk of various catastrophic events, including but not limited to the occurrence of: severe regional or local weather events or trends and related fires or flooding; wide-spread insect or pest infestations on one or more of our

properties; significant geological events such as earthquakes, volcanic eruptions and major erosion in the form of landslides; significant geopolitical events, conditions or developments such as significant international trade disputes or domestic or foreign terrorist attacks, domestic or foreign armed conflict and political unrest; and regional health epidemics or global health pandemics, such as the 2020 outbreak of the novel strain of coronavirus and its many subsequent mutations. Any one or more of these events or conditions, or other catastrophic events or developments, could directly or indirectly significantly affect our ability to operate our businesses and adversely affect domestic and foreign general economic conditions and thus domestic or foreign market demand for our products. The impact of any one or more of these events or conditions may also trigger the occurrence of, or exacerbate, other risks discussed herein, any one of which could have a material adverse effect on our business, financial condition, results of operations and cash flows.

PRODUCT PRICING AND PROFITABILITY

Our profitability is affected by market dynamics outside of our control.

Because commodity products have few distinguishing properties from producer to producer, competition for these products is based largely on price, which is determined by supply relative to demand and competition from substitute products. Prices for our products are also affected by many other factors outside of our control. As a result, we have little influence or control over the timing and extent of price changes, which often are volatile in our industry. Moreover, our profit margins with respect to these products depend, in part, on managing our costs, particularly raw material, labor (including contract labor) and energy costs, which represent significant cost components that also fluctuate based upon market and other factors beyond our control.

Excess supply of logs and wood products may adversely affect prices and margins.

Producers in our industry have in the past put downward pressure on product pricing by selling excess supply into the market. Our industry may increase harvest levels, which could lead to an oversupply of logs. Wood products producers may likewise expand manufacturing capacity, which could lead to an oversupply of manufactured wood products. Any such increases of industry supply to our markets could adversely affect our prices and margins.
